BUNDABERG CRITICAL BREAKDOWN

Airheater Tube Modules

Welded carbon steel air heater tubes

ISO 9001

BUREAU VERITAS
Certification

Bundaberg Walkers Engineering and FFF Australia provide a perfectly executed breakdown solution. 80t of welded carbon steel air heater tubes, numbering 8000; manufactured and airfreighted to Queensland within 30 days.

The experienced team at Bundaberg Walkers Engineering were tasked with a critically urgent breakdown requiring the full replacement of multiple air heater modules. They chose FFF Australia as their supply partner to deliver this near impossible deadline.

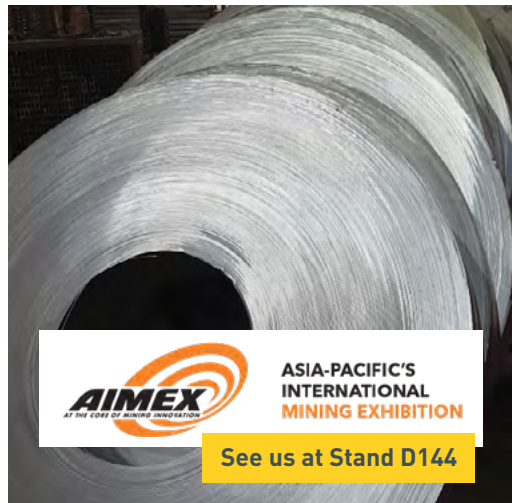

Bundaberg Walkers Engineering needed 8000 of these application-specific tubes in 30 days. The first batch left our manufacturing partner within 21 days and by the end of the following week, precise logistical coordination had ensured that all 80 tonnes of tube were airfreighted on 5 cargo planes from China to Queensland.

Faced with an unconventional challenge, FFF Australia and Bundaberg Walkers Engineering worked closely to flawlessly execute this project.

Expedited supply allowed Bundaberg Walkers Engineering to fabricate the modules and have the plant up and running with minimal delays.

FFF Australia are proud to support our long term friends at Bundaberg Walkers Engineering in delivering a successful project outcome.

International Strategic Sourcing Specialists giving all Australian businesses access to the global supply chain.
