URGENT DELIVERY OF EX-STOCK 304H BOILER TUBES
International sourcing, testing, and airfreighted delivery

ISO 9001

BUREAU VERITAS
Certification

FFF Australia has expedited the ex-stock supply, testing and airfreight delivery of approximately 500 metres (4.2 Tonnes) of SA213-TP304H boiler tubes.

As international sourcing specialists, FFF Australia was able to locate and secure the 304H grade tube in India. Being a rarely stocked material grade, OD & WT, FFF Australia assured the quality by carrying out sample destructive testing at a third-party laboratory in Mumbai.

Independent testing included;

- Spectro for chemical,
- Mechanical – UTS, Yield, % elongation, flaring test, flattening test, hardness,
- Corrosion test – IGC Practice E,
- Metallography – Grain size,
- Visual, dimensional and PMI performed on 100% of the tubes by FFF inspector.

All material, testing and documentation was provided to the client to satisfy quality requirements.

FFF's supply scope also ensured airfreight supply and delivery to the client site to meet their timescales. The team at FFF ensured that they adhered to procedures and processes to mitigate COVID-19 whilst ensuring the safe and timely delivery of the urgent materials.

"I appreciate your efforts in getting the inspections carried out in a timely manner and sourcing at short notice. Your due diligence on meeting the supply specs is refreshing to see."
